

10 EASY STEPS FOR A SUCCESSFUL CLOUD ERP IMPLEMENTATIONS

ERP implementation are successful provided, we follow a methodology with a clearly defined Scope, Timeline, Cost to implement. If anyone of these 3 areas are squeezed then the other two gets affected. So as a project manager, you have to balance all the 3 elements for the success of an ERP Implementation.

STEP 1

Identify the Stakeholders and Business Objectives

- Identify and define the Business objectives
- Identify the Stakeholders
- Who is responsible for the work and implementation

STEP 2

Identify the project scope for the current phase of implementation

Define Project scope

STEP 3

Do a Current System Study

- Identify the GAPS, Customisation etc
- Finalise the scope with Stakeholders
- Get the right resources
- Agreement on timelines

STEP 4

- Design documentation
- Allocate the people
- Development with Test cases
- Release to customer for Acceptance

Customisation work

STEP 5

Data migration

- Identify the master data
- Find the transaction data that needs to be migrated
- Write migration scripts
- Do a Sample Data migration and generate reprot.
